Writing of security Programs

Corporate Security Training

Bomb Threat Management

Understanding & Managing Security Threats

Security Management

Security Awareness for Employees

First Line Crisis Mitigation

Crime Prevention Techniques

Campus, Hospital and Hotel Security

Risk & Vulnerability Assessment

Basic Investigations Course

ISIS in Afghanistan Is Still Able to Field Thousands of Fighters

In April 2017, U.S. forces dropped one of the largest non-nuclear bombs on an ISIS cave complex in Nangarhar province, Afghanistan. Dubbed the 'mother of all bombs' it killed dozens of fighters. Former U.S. Afghanistan commander Gen. John Nicholson's decision to unleash such an immense display of American air power against a militant group that at the time was estimated to number less than 1,000 fighters was highly criticized. But, despite years of American bombardment and hundreds of counterterrorism operations launched against the militant group largely cornered in remote pockets of Kunar and Nangarhar provinces, ISIS fighters in Afghanistan number in the thousands while maintaining the ability to launch deadly high profile attacks across the country.

ISIS Announces al-Baghdadi's Successor, Says He Fought Against U.S.

ISIS acknowledged the death of leader Abu Bakr al-Baghdadi, named his successor and told Americans to "not rejoice" in his death because the terror group "today stands at the thresholds of Europe and Central Africa, and indeed is expanding and remaining by God's permission from east to west." In audio released by ISIS' al-Furqan media and a statement printed in the new issue of the weekly newsletter *al-Naba*, ISIS also confirmed that spokesman Abu al-Hassan al-Muhajir had been killed in an airstrike the day after al-Baghdadi died in a U.S. raid on his Syrian compound. Abu Ibrahim al-Hashimi al-Qurayshi was named the new leader of ISIS, while Abu Hamza al-Qurayshi was named the new spokesman. Qurayshi indicates the tribe of Muhammad.

Narita Airport Steps Up Security Ahead of 2020 Olympics

Japan Airlines (JAL) is in the process of revising its international airport security at Narita Airport, ahead of increased tourism expectations and the Summer Olympic and Paralympic Games in 2020. To begin with, JAL has introduced a self-service bag drop system, which became operational on October 28. Travelers have the option to check-in through the airport kiosk and print out their individual baggage tags. Once complete, the traveler can drop off their baggage and head toward the boarding gate. This is followed by a new facial recognition service which will go live from spring 2020. In line with the International Air Transport Association's One ID initiative, JAL will implement facial recognition technology that negates the need to present documents.

SIA Forecasts Cybersecurity, AI and Facial Recognition as 2020's Top Security Megatrends

The Security Industry Association (SIA) has identified and forecast its 2020 Security Megatrends, which form the basis of SIA's signature annual Security Megatrends report defining the top 10 factors influencing both short- and long-term change in the global security industry. For the second year in a row, cybersecurity was identified as the predominant trend shaping the security industry.

Airports Rise to Technology Challenge Posed by Drone Threats

Airports worldwide still face complex and costly challenges in protecting their operations from the threat of disruption from drone flights, and there remains no “silver bullet” solution to the problems, according to experts addressing the Drone Disruption Summit held in London on October 15. Delegates heard how major international gateways like London Gatwick and Paris Charles de Gaulle and Orly have made multimillion-dollar investments over the last 12 months that have required intense follow-on work to ensure effective integration of detection and protection systems with overall airport operations.

Investigators identify suspicious substance sent to City Hall

Atlanta Fire Investigators say the powdery substance that was delivered in an envelope to Atlanta City Hall was in fact suspicious. Hazmat crews decontaminated 3 City Hall employees who came into contact with what investigators describe as a sodium-based substance, similar to what is found in the manufacturing of airbags. Investigators say it is a toxic product but only a small portion was delivered to the loading dock area at City Hall. “It is suspicious,” said Sgt. Stafford. “We just don’t know why it was sent here, that’s to be determined.” Atlanta Police shut down Central Avenue between Trinity Avenue and Mitchell Street for several hours, redirecting rush hour traffic during the afternoon commute.

Supreme Court Declines to Hear Case Promoting Islam in Public School

The U.S. Supreme Court declined to review the [case](#) of a Christian high school student in Maryland who, despite threats of receiving a failing grade, refused to deny her faith by making a written profession of the Muslim conversion prayer known as the [shahada](#). The *shahada* states, “There is no god but [Allah](#) and Muhammad is the messenger of Allah.” Caleigh Wood, an eleventh-grader in La Plata High School, a public school in La Plata, Maryland, was represented in the case by the [Thomas More Law Center](#), nonprofit public interest law firm known for defending First Amendment rights – particularly those that violate the [Establishment Clause](#) of the U.S. Constitution. As part of the school’s “World History” curriculum, the La Plata High School

Upcoming Course at the Singapore Aviation Academy – 13 to 17

This course provides you with the knowledge and skills in aviation security auditing techniques to effectively conduct compliance audits and manage quality control programmes. It aims to enhance the awareness of aviation security managers and supervisors on auditing procedures and techniques in line with the requirements of ICAO Annex 17 (Security) and ICAO Document 8973 (Security Manual).
