## Consultancy Services

### Security Audits & Inspections

Security audits for Commercial Premises, Airports, Ports and Shipping Vessels.

### Regulated Agent Regime for Airfreight Security

Study, Development and Implementation of RAR in accordance to ICAO Annex 17.

### Hold Baggage Screening System

Study, Development and Recommendations for HBS systems in Airports and Ports.

### Writing of security Programs

## Corporate Security Training

### Bomb Threat Management

Understanding & Managing Security Threats

### Security Management

Security Awareness for Employees

### First Line Crisis Mitigation

### Crime Prevention Techniques

Campus, Hospital and Hotel Security

### Risk & Vulnerability Assessment

### Basic Investigations Course

## US white supremacist arrested hours before far-right conference in Norway

An American [white supremacist](#) was arrested hours before he was due to speak at an international far-right conference in [Norway](#). Greg Johnson was detained under immigration law on the basis that he posed a threat to national interests, according to the police security agency PST. "He stands for and communicates an extreme right-wing ideology," PST spokesman Martin Bernsen said. "There's a danger that it can result in violence." The authorities are now seeking to deport him back to the US later this week.

## Password Security: How to Really 'Own IT' for National Cybersecurity Awareness Month

National Cybersecurity Awareness Month (NCSAM) is in its 16<sup>th</sup> year. The theme for 2019 – Own IT. Secure IT. Protect IT. – is focused on encouraging personal accountability and proactive behavior in security best practices and digital privacy. Considering that individually we are [picking up our smartphones on average of 77 times a day](#) and [spending nearly 12 hours a day in front of a screen](#), the digital lines between work and personal lives are all but gone.

## Thales Launches System to Protect Critical Sites from Malevolent Drone Use

To address the growing threat of malevolent drone usage, Thales has developed a fully integrated drone countermeasures solution designed to detect, identify, track and neutralize drones flying in civil airspace in order to protect sensitive sites such as airports, sports arenas, critical infrastructure and large-scale events in urban areas. The Gamekeeper holographic radar, which is designed to provide full 3D coverage of airspace surveillance over 90° sector, identifies and tracks all types of air platforms flying at low altitude and medium speed within a radius of 7 km. Infrared and radiofrequency sensors add to the system's threat identification and classification performance, using real-time data fusion techniques to determine the exact type of unmanned aircraft involved.

## Is Germany's Move to Strip Terrorist Citizenship the Best Route?

Dual-national citizens fighting in foreign terrorist movements could lose their German citizenship under a new law. Repatriation and prosecution might still be the better route, researcher argues. "Germany should repatriate its citizens who left to take part in violent terrorist movements abroad and prosecute or reintegrate them as appropriate, says Kilian Roithmaier, a researcher at the Asser Institute in the Netherlands, in a [report](#) published by the International Centre for Counter-Terrorism at The Hague. This will ensure that they are brought to justice, he argues, but it does bring its own problems. Like many countries, Germany has an issue with its citizens who left to join the global jihadist movement, notably the Islamic State (ISIS) and its now-defunct Caliphate in Iraq and Syria.

## Passenger Survey Reveals What Travelers Want and Don't Want from Airport Security

The International Air Transport Association (IATA) has published its [annual survey](#) detailing passenger priorities and found that 70% of travelers are happy to share their personal biometric data if it speeds up their airport security process. This percentage increases in correlation with the number of flights taken per year with the highest support for biometrics (76%) among flyers who travel for business more than 10 times per year. The survey also revealed that 46% of passengers would prefer to use biometric identification instead of a paper passport for their journey and 30% would opt to use a biometric token to board the plane.

## Orlando airport to have family facial recognition tech up by holiday rush

A simpler security and customs system at [Orlando International Airport](#) can help improve the experience of the nearly 50 million passengers who pass through the air hub — and that solution may be up and running soon. Earlier this year, the airport revealed it was in talks with U.S. Customs & Border Protection to incorporate a new facial recognition system for international arrivals that could process entire families together at the same time and speed up what can be a lengthy — and annoying — moment for visitors. And now that tech is going to be used starting in early December.

## Potential ISIS Retaliation, Holiday Season Put Houses of Worship on Guard

Faith-based organizations and houses of worship have been cautioned to exercise extra awareness as retaliation from ISIS could fuel attacks in the wake of leader Abu Bakr al-Baghdadi's death during a heightened terror propaganda season from pre-Thanksgiving to New Year's Day. In the run-up to and during the holidays, ISIS supporters churning out much of the group's calls to action have promoted Christmas market attacks in Germany (2016) and France (2018) as well as the 2015 attack on a county employees' holiday party in San Bernardino, Calif. Everitt Aaron Jameson, a Modesto, Calif., tow-truck driver, pleaded guilty last year to planning a Christmas-season attack on San Francisco's Pier 39; he had "liked" on Facebook an ISIS propaganda image depicting Santa with a box of dynamite in New York's Times Square.

## PERSPECTIVE: Baghdadi Just Confirmed ISIS 'Martyrdom' Narrative, Ensuring ISIS Will Live

To ISIS supporters around the globe, Abu Bakr al-Baghdadi was a beacon of hope in an extremely troubled world. Thus, that Baghdadi has been killed will do little to diminish ISIS, which is still alive and well in both Syria and Iraq, carrying out weekly attacks in both places. According to some terrorism experts, ISIS is as strong now as it was at its outset, with just as many members active on the ground now as then. Thus Baghdadi's importance, as both a symbol and personage, to ISIS needs to be viewed through the lens from which his organization emerged and operated and where it will likely be going in the future.

CJ Security Consulting Group

## Aviation & Maritime Training

Aviation Security for Senior  
Management, Supervisors

AVSEC for front-line Security  
Officers

Tactical Profiling Course

Bomb Threat Handling

Document Verification Course  
(Travel documents)
